

Newsletter TimeSens #4 – June 2016

Dear TimeSens user,

On June 1, 2016, version (V1.1.0601) will automatically replace the current version. This new version will introduce a **new visual identity, a new logo, and several new features and improvements** (see below).

If you ever plan to attend the **EuroSense conference** (11 - 14 September 2016, Dijon, France), you will be able to improve your TimeSens skills during our pre-event training (10 September) or to discover the new functionalities (14 September PM). More information to come!

As ever, your feedbacks on this new version are most welcome!

The TimeSens team

New visual identity and logo

TimeSens has benefited from a modernization in line with our new slogan: "Taste for innovation". In the near future, the design of the software, website and documents will be evolving according to this new visual identity.

New features and improvements

- The **scenario view** interface has been simplified
- **Discrete and continuous scales** have no longer relative height, but absolute. **Old sessions including these controls can have slightly different designs.**
- A new **session wizard** allows you to create sessions with a few clicks. It features several protocols for data acquisition: hedonic test, sequential monadic profile, comparative profile, CATA, TDS, T-CATA, dynamic liking, progressive profile, sorting, ranking, napping, flash profile, and triangle test.
- A new stand-alone installer for TimeSens for Panel Leader can be downloaded from the website <http://www.timesens.com/Download/Installer/setup.exe>.
